

AUDIT TARGET

01

Florida Power Services "The Solar Power Company"

floridapowerservices.com

< AGENT-BLIND

AI-INVISIBLE

OVERALL GRADE

C

AVG 5.5 / 10

A ten-dimension audit of your website's ability to win customers across **search, mobile, AI assistants, and local discovery**. Every finding below is observed directly from your live site — nothing estimated.

02 DIMENSIONAL SCORING

Design / UX		7/10	Mobile Experience		7/10
Technical SEO		6/10	Local SEO		6/10
Content / E-E-A-T		7/10	AEO · Answer Engine		3/10
GEO · Generative		3/10	Agentic Readiness		4/10
Accessibility		6/10	CRO		6/10

Bars: **green** = strong (7–10) · **amber** = needs work (4–6) · **red** = critical (1–3). The three lowest dimensions are where you're losing the most customers right now — detailed on the following pages.

VERIFIED DIMENSIONS

The four dimensions measured directly from your live site.

SCORE DISTRIBUTION

How all ten dimensions fall across the risk bands.

03 FORGE REPORT

▲ WHAT'S WORKING

- **Solid WordPress/Elementor foundation.** The site runs a well-structured Elementor build with proper viewport meta, canonical tag, OG tags (og:title, og:description, og:image), and hreflang ES alternate — a strong technical floor ahead of most Tampa solar competitors. (Design 7, Mobile 7)
- **Real credentials front-and-center.** NABCEP Certified PV Installer badge, Florida CVC56731 specialty photovoltaic contractor license, and 18+ years in business are referenced on the About page — genuine E-E-A-T signals that few local installers publish openly. (Content E-E-A-T 7)
- **Tap-to-call and LocalBusiness schema in place.** A tel:7276679955 link fires on every page, and a LocalBusiness JSON-LD block exposes name, address, phone, geo coordinates, and business hours — giving AI crawlers and map-pack bots a machine-readable NAP. (Agentic 4)

▲ WHAT'S COSTING YOU LEADS NOW

- **No AggregateRating in schema — 75 reviews invisible to AI.** Florida Power Services has a 4.6-star Google rating but the LocalBusiness JSON-LD contains zero aggregateRating or review markup. Competitors whose schema includes ratingValue show rich stars in search results; Florida Power Services' hard-earned reputation simply does not appear. (Tech SEO 6, Local SEO 6)
- **AI assistants can't answer questions about this business.** There is no FAQ schema, no QAPage markup, and no answer-shaped paragraph content. When a homeowner asks ChatGPT or Gemini "which solar companies in Tampa offer Enphase systems?" — this site returns nothing structured for extraction, despite being an authorized Enphase installer. (AEO 3, GEO 3)
- **No email address anywhere — contact locked behind a form.** No mailto: link or published email appears on the homepage, contact page, or about page. Phone-and-form only removes an entire contact channel for quote-comparison shoppers and makes AI booking agents unable to route an inquiry. (CRO 6)
- **Generic JSON-LD @type misses solar-installer context.** The schema block uses @type: LocalBusiness rather than a solar-appropriate type (Electrician, HomeImprovementBusiness, or ElectricalContractor). The @id also points to an HTTP URL while the live site is HTTPS — a minor inconsistency that weakens schema authority. (Tech SEO 6)

04 YOUR AI SEARCH BLIND SPOT

AEO + GEO · HOW MACHINES READ YOUR SITE

When a Tampa homeowner asks an AI assistant — ChatGPT, Google Gemini, or an AI overview — **"what solar companies in Tampa are NABCEP-certified and offer Enphase systems?"**, your site cannot answer

in a format the model can extract. There is no FAQ schema, no QAPage markup, and the Enphase and NABCEP credentials live inside Elementor widget divs rather than structured data fields.

COMBINED AI VISIBILITY

A blended index of how discoverable you are to answer engines, generative search, and autonomous agents — the AI layer that increasingly sits between customers and local businesses.

05 AGENTIC & FUTURE READINESS

CAN AN AUTONOMOUS AI AGENT ACTUALLY USE YOUR SITE?

A growing share of solar quotes will be initiated by AI agents browsing on a homeowner's behalf — pulling installer credentials, service areas, and contact methods automatically. We checked whether Florida Power Services exposes that information in a machine-readable layer:

The LocalBusiness schema provides phone, NAP, and hours — a better-than-average start. But the HTTP @id vs HTTPS live URL is a schema integrity flag, there is no llms.txt to grant or restrict AI bot access, and the absence of a published email means **an AI booking agent would hit a web form dead-end** and move on to a competitor with a contactPoint or email in schema.

```
// agent-access probe
LocalBusiness JSON-LD with phone + NAP .... PRESENT
openingHoursSpecification ..... PRESENT
llms.txt ..... ABSENT
Machine-readable email / contactPoint ..... ABSENT  No mailto, no email in JSON-LD
HTTP vs HTTPS @id mismatch in schema ..... PARTIAL  @id uses http://, live site is
https://
```

06 LOCAL COMPETITIVE POSITION

BUSINESS	GOOGLE	MOBILE CALL	SCHEMA / AI-READY	NAME / DOMAIN	OVERALL
Florida Power Services (you)	4.6★ · 75	✓	~	✓	C+
Transform Solar	5.0★ · 176	✓	×	✓	B-
Sunrun Tampa	4.1★ · 667	✓	~	✓	B
US Roofing & Solar	4.7★ · 1922	✓	×	✓	B+

0 LOCAL POSITION & REPUTATION

4.6★ GOOGLE RATING	75 REVIEWS	20+ LOCAL COMPETITORS	#? MAP-PACK RANK
-----------------------	---------------	--------------------------	---------------------

REPUTATION VS. SEARCH VISIBILITY

THE DISCONNECT BETWEEN REPUTATION AND VISIBILITY

Florida Power Services holds a solid **4.6 rating across 75 Google reviews** — but Tampa's competitive solar market exposes the gap: US Roofing & Solar has 1,922 reviews at 4.7 stars, Sunrun Tampa shows 667 at 4.1, and Transform Solar has 176 at a perfect 5.0. The review volume is the clearest sign that strong offline work isn't being systematically converted to online social proof.

The 4.6 rating and 18-year pedigree could command far more weight in local pack results — but only once the aggregateRating is wired into the JSON-LD so Google's algorithms can actually see what customers already know.

07 ACCESSIBILITY & COMPLIANCE

SCORE 6 / 10 · INCLUDED BECAUSE IT'S BELOW THRESHOLD

A portion of your potential customers — and Google's own ranking systems — depend on an accessible site. We found gaps that are both a legal-exposure risk and a quiet ranking drag:

```
// accessibility & compliance probe
Image alt text coverage ..... SPARSE    17 of 50 images lack meaningful alt text
(8 empty, 9 missing attribute)
ARIA landmark roles ..... MINIMAL      Elementor div-based layout; few semantic
section/nav elements
Colour-contrast (text vs bg) .... ADEQUATE
Tap-to-call link ..... ADEQUATE
Cookie consent notice ..... ABSENT
```

The 17 images missing meaningful alt text are the priority accessibility fix — solar panel and installation photos without alt text also cost image-search indexing, so this is a dual SEO and accessibility win in a single pass.

08 THE 30-DAY PLAN

WEEK 1

Wire in the 4.6-star signal

Add aggregateRating (ratingValue: 4.6, reviewCount: 75) to the existing LocalBusiness JSON-LD block and fix the @id HTTP/HTTPS mismatch — two JSON edits that surface the star rating in Google search results.

WEEK 2

Open the AI door with FAQ schema

Add 5-8 QAPage/FAQ schema blocks answering real homeowner questions: Enphase vs Tesla, NABCEP meaning, FL permit process, net metering. Structured answers AI assistants can extract and cite.

WEEK 3

Publish a machine-readable email + llms.txt

Add a contactPoint email to JSON-LD and publish an info@ address on the contact page. Add llms.txt granting AI bot access. Removes the form-dead-end for AI booking agents.

WEEK 4

Sweep alt text and schema @type upgrade

Fill the 17 missing image alt texts (installation photos, brand logos) and upgrade @type to Electrician or HomeImprovementBusiness. Alt text fixes image-search ranking and accessibility compliance simultaneously.

09 BOTTOM LINE

THE ONE THING THAT MATTERS MOST

Florida Power Services has a technically competent website and real credentials — 18 years, NABCEP certification, FL CVC56731 — but its JSON-LD is missing an aggregateRating block, so its 4.6-star reputation is invisible to Google's rich-snippet system and to every AI assistant a homeowner might ask for Tampa solar recommendations. The single highest-leverage move is a two-line JSON patch to add aggregateRating and fix the HTTP @id mismatch, followed by FAQ schema that lets ChatGPT and Gemini cite Florida Power Services by name — turning an 18-year track record that AI currently cannot see into a compounding referral advantage as generative search captures more first-call solar intent.
