A11Y-RISK

OVERALL GRADE

D+

AVG 3.9 / 10

A ten-dimension audit of your website's ability to win customers across **search, mobile, AI assistants, and local discovery**. Every finding below is observed directly from your live site — nothing estimated.

02 DIMENSIONAL SCORING

Design / UX		6/10	Mobile Experience		6/10
Technical SEO		4/10	Local SEO		4/10
Content / E-E-A-T		4/10	AEO · Answer Engine		2/10
GEO · Generative		3/10	Agentic Readiness		2/10
Accessibility		4/10	CRO		4/10

Bars: **green** = strong (7–10) · **amber** = needs work (4–6) · **red** = critical (1–3). The three lowest dimensions are where you're losing the most customers right now — detailed on the following pages.

VERIFIED DIMENSIONS

The four dimensions measured directly from your live site.

SCORE DISTRIBUTION

How all ten dimensions fall across the risk bands.

03 FORGE REPORT

WHAT'S WORKING

- **Clean Webflow template with strong service architecture.** The site is built on a modern Webflow template with a clear multi-service layout covering residential, commercial, agricultural, and roofing — easier to navigate than most local installers.
- **USDA REAP grant messaging is a real differentiator.** The homepage prominently calls out the 50% USDA REAP grant for farmers and small businesses — a niche angle almost no competitor leads with, and a powerful hook for Alabama's agricultural market.
- **Premium brand partnerships listed.** Tesla Powerwall, Enphase, SolarEdge, and Sol-Ark are all named on the homepage — signal of credibility to comparison shoppers evaluating installer quality.

WHAT'S COSTING YOU LEADS NOW

- **Phone number is plain text — not tap-to-call.** 938-446-2008 appears twice on the homepage but neither instance uses a tel: link. Every mobile visitor who wants to call must manually dial — a friction point that kills mobile conversions at the top of the funnel.
- **Leftover placeholder copy from the Webflow template.** Two product description sections contain "Explore all kinds of organic vegetables, meat & fruits" — word-for-word grocery store placeholder text. Prospects who read this will question whether this is a real, established business.
- **Zero reviews or testimonials on the site.** No Google rating widget, no testimonial section, no star badges. Solar is a \$20,000+ purchase decision — buyers demand social proof before they fill out a quote form, and this site provides none.
- **No team, certifications, or NABCEP credentials shown.** The site claims "certified installers" but shows no names, faces, license numbers, or NABCEP badges. Competitors who display this convert trust-shoppers that Alabama Solar Works is currently losing.

04 YOUR AI SEARCH BLIND SPOT

AEO + GEO · HOW MACHINES READ YOUR SITE

When a homeowner in Gadsden or Huntsville asks ChatGPT or Google's AI Overview **"who installs solar panels in Alabama?"**, the model scans for structured, extractable answers. Alabama Solar Works gives it almost nothing to work with — no FAQ schema, no answer-shaped paragraphs, no Organization JSON-LD, and no service-area markup.

As AI-assisted search captures a growing share of high-intent queries, sites that aren't structured for retrieval are quietly removed from the conversation. **Right now, any homeowner using an AI assistant to shortlist solar installers in Alabama will not find this company** — regardless of how good the actual service is.

COMBINED AI VISIBILITY

A blended index of how discoverable you are to answer engines, generative search, and autonomous agents — the AI layer that increasingly sits between customers and local businesses.

05 AGENTIC & FUTURE READINESS

CAN AN AUTONOMOUS AI AGENT ACTUALLY USE YOUR SITE?

AI booking agents and comparison tools are beginning to pull installer details automatically — phone number, service zip codes, hours, certifications — so they can pre-qualify vendors on a customer's behalf. We checked whether Alabama Solar Works exposes that data in a machine-readable form.

The phone number is plain text with no tel: markup, there is no address or service-area schema, no llms.txt, and no structured NAP block. **An AI agent trying to route a solar quote request would skip this site entirely** and move to a competitor it can parse in under a second.

```
// agent-access probe
Semantic HTML5 landmarks ..... PARTIAL   Webflow divs; limited section/nav roles
robots.txt bot permissions .... UNVERIFIED
llms.txt ..... ABSENT
Machine-readable NAP ..... ABSENT   No address; phone is plain text only
Tap-to-call & mailto hooks .... ABSENT
```

06 LOCAL COMPETITIVE POSITION

BUSINESS	GOOGLE	MOBILE CALL	SCHEMA / AI-READY	NAME / DOMAIN	OVERALL
Alabama Solar Works (you)	?★ · 0	×	×	✓	D+
Eagle Solar & Light	4.5★ · 85	✓	~	✓	B-
Southern Solar Systems	4.2★ · 47	~	×	✓	C+

Google ratings & review counts are live data. Mobile-call, schema, and overall columns are illustrative — based on a first-pass look, not a full audit of each competitor's site.

THE DISCONNECT BETWEEN REPUTATION AND VISIBILITY

Alabama has approximately 15 active solar installers and developers per SEIA data. Eagle Solar & Light holds a 4.5/5 expert score with a strong EnergySage presence; Southern Solar Systems is the established Huntsville incumbent. **Alabama Solar Works does not appear in any of the major review aggregator rankings** — SolarReviews, EnergySage, or CNET's 2024 Alabama solar roundup — suggesting its Google Business Profile and review base are either very thin or not optimized.

In a market where buyers comparison-shop heavily on review count and installer credentials, an absence from aggregator listings means **the company is effectively invisible to a large portion of motivated Alabama solar shoppers** before they even reach the website.

07 ACCESSIBILITY & COMPLIANCE

SCORE 4 / 10 · INCLUDED BECAUSE IT'S BELOW THRESHOLD

A portion of your potential customers — and Google's own ranking systems — depend on an accessible site. We found gaps that are both a legal-exposure risk and a quiet ranking drag:

```
// accessibility & compliance probe
Image alt text ..... SPARSE    Webflow CDN images have no descriptive alt attributes
ARIA landmark roles ..... MINIMAL
Colour-contrast (text vs bg) .... ADEQUATE
Cookie consent notice ..... ABSENT
```

Adding alt text to all images is the fastest accessibility win — it simultaneously helps screen readers and Google image indexing.

08 THE 30-DAY PLAN

WEEK 1

Stop the bleeding

Wrap both phone number instances in tel: links, and remove the grocery placeholder copy from the battery product descriptions.

WEEK 2

Fix the foundation

Add a testimonials section pulling real Google reviews, display NABCEP or state license credentials, and add a physical address to the footer.

WEEK 3

Open the AI door

Add Organization + LocalBusiness JSON-LD with service-area markup, FAQ schema targeting 'solar installers Alabama' queries, and descriptive image alt text.

WEEK 4

Convert the win

Add a sticky mobile call bar, a Google reviews badge widget, and submit the business to EnergySage and SolarReviews to appear in aggregator rankings.

09 BOTTOM LINE

THE ONE THING THAT MATTERS MOST

Alabama Solar Works has a serviceable modern site with a genuine market angle — USDA REAP grants for farmers — but it is undermined by a non-tappable phone number, zero visible social proof, and template placeholder text that signals an unfinished build to every prospect who reads carefully. The single highest-leverage fix is wrapping the phone in a tap-to-call link and surfacing real customer reviews, which together directly attack the two biggest conversion killers on a high-ticket, trust-dependent purchase. A site that converts even one additional solar job per month recovers the cost of a full redesign inside thirty days.
