AVG 3.7 / 10

A ten-dimension audit of your website's ability to win customers across **search, mobile, AI assistants, and local discovery**. Every finding below is observed directly from your live site — nothing estimated.

02 DIMENSIONAL SCORING

Design / UX		5/10	Mobile Experience		6/10
Technical SEO		3/10	Local SEO		4/10
Content / E-E-A-T		5/10	AEO · Answer Engine		2/10
GEO · Generative		3/10	Agentic Readiness		2/10
Accessibility		4/10	CRO		3/10

Bars: **green** = strong (7–10) · **amber** = needs work (4–6) · **red** = critical (1–3). The three lowest dimensions are where you're losing the most customers right now — detailed on the following pages.

VERIFIED DIMENSIONS

The four dimensions measured directly from your live site.

SCORE DISTRIBUTION

How all ten dimensions fall across the risk bands.

03 FORGE REPORT

▲ WHAT'S WORKING

- **Licensed and credentialed — TECL displayed.**
The Texas Electrical Contractor License number (TECL: 37877) appears in the footer, signaling legitimacy to homeowners who look for it. Most local solar sites don't bother.
- **Real customer testimonials on the homepage.**
Six named, five-star reviews are embedded in the page body — including one bilingual review — giving Spanish-speaking Houston homeowners an immediate trust signal.
- **Interactive solar savings calculator present.** A homepage savings calculator lets visitors enter their monthly bill and yearly consumption — a rare engagement feature for a small installer that encourages dwell time and repeat visits.

▲ WHAT'S COSTING YOU LEADS NOW

- **Phone number is buried on a subpage — no tap-to-call anywhere on the homepage.** The phone number (281) 417-7593 appears only on /customersupport, behind a nav click. A Houston homeowner on a phone who lands on the homepage has no one-tap way to call. Every extra step is a lost lead — solar is a high-intent, high-ticket category where phone friction directly costs installations.
- **No address or structured contact data on the homepage.** The business address (3611 Hollybrook Lane, Houston TX 77039) is only discoverable on third-party directories. Google's local algorithm expects NAP (name, address, phone) consistently displayed on the site itself. Without it, map-pack ranking suffers, and Google Business Profile signals are weakened.
- **Zero structured data — no Organization, LocalBusiness, or FAQ schema.** The Squarespace template ships no JSON-LD. There is no machine-readable Organization entity, no LocalBusiness schema with service area, and no FAQ/QAPage markup. This means neither Google's rich results nor AI assistants can reliably extract who this company is, where they serve, or what they do.
- **Hero has a CTA link but no H1 — the page title tag is empty.** Crawlers found no <h1> tag on the homepage; the hero CTA ('Join the Solar Revolution Today!') is an anchor, not a heading. The browser tab title is blank. Both signals damage search ranking and make the page unidentifiable to assistants scanning for the primary topic of the page.

04 YOUR AI SEARCH BLIND SPOT

AEO + GEO · HOW MACHINES READ YOUR SITE

When a Houston homeowner asks ChatGPT or Google's AI Overview "who installs solar panels in Houston TX?", the model scans indexed pages for structured, answer-shaped content. Luxury Energy Solar's site has none of that: no FAQ schema, no answer paragraphs explaining how the installation process works or what

COMBINED AI VISIBILITY

A blended index of how discoverable you are to answer engines, generative search, and autonomous agents — the AI layer that increasingly sits between customers and local businesses.

05 AGENTIC & FUTURE READINESS

CAN AN AUTONOMOUS AI AGENT ACTUALLY USE YOUR SITE?

AI agents that book solar consultations on a homeowner's behalf need to extract the company's phone number, service area, hours, and licensing credentials from the site automatically. On luxuryenergysolar.com, the phone number does not appear on the homepage at all — it requires navigating to /customersupport. There is no llms.txt, no machine-readable NAP block, and no semantic HTML5 landmarks that would help a bot orient itself.

An AI booking agent probing this site would fail to find a callable number and move on to a competitor it can read. The TECL license number in the footer is the one structured signal present, but without surrounding Organization schema it carries no semantic weight for automated systems.

```
// agent-access probe
Semantic HTML5 landmarks ..... PARTIAL   Squarespace builder divs; limited
section/nav roles
robots.txt bot permissions .... UNVERIFIED
llms.txt ..... ABSENT
Machine-readable NAP ..... ABSENT   Phone only on /customersupport; address only
on Angi
Tap-to-call & mailto hooks .... ABSENT
```

06 LOCAL COMPETITIVE POSITION

THE DISCONNECT BETWEEN REPUTATION AND VISIBILITY

Luxury Energy Solar carries a strong reputation — a self-reported 5-star Google rating and 26 verified reviews on Angi — in a Houston solar market where CenterPoint's 2026 rebate program is actively driving homeowner demand. That demand creates serious competition: well-funded local installers like Sunshine Renewable Solutions (4.9 / 142 Google reviews, NABCEP-accredited) and KW Solar (established, own solar CRM, TDLR-licensed) are aggressively capturing the same homeowners.

The disconnect is stark: **good word-of-mouth that the website fails to amplify**. The six review quotes on the homepage have no aggregate star rating, no review count, and no schema markup — so Google cannot display a rich star snippet in search results. A homeowner comparing installers sees a blank where a 5-star badge should be.

07 ACCESSIBILITY & COMPLIANCE

SCORE 4 / 10 · INCLUDED BECAUSE IT'S BELOW THRESHOLD

A portion of your potential customers — and Google's own ranking systems — depend on an accessible site. We found gaps that are both a legal-exposure risk and a quiet ranking drag:

```
// accessibility & compliance probe
Image alt text ..... SPARSE      Hero and Instagram feed images have no alt
attributes
ARIA landmark roles ..... MINIMAL  Squarespace divs; no explicit landmark
regions
Colour-contrast (text vs bg) .... ADEQUATE
Cookie consent notice ..... ABSENT
```

Add alt text to all hero and project images first — it doubles as on-page keyword reinforcement for solar terms while fixing the accessibility gap.

08 THE 30-DAY PLAN

WEEK 1	WEEK 2	WEEK 3	WEEK 4
Stop the bleeding Add a tap-to-call phone number (281-417-7593) to the homepage header and footer. Surface the address. These two changes alone make the site readable by Google Maps and mobile visitors.	Fix the foundation Add a proper H1 tag to the hero section and fill the page title/meta description with Houston solar keywords. Fix the blank browser tab title — it is the first thing Google indexes.	Open the AI door Inject LocalBusiness + Organization JSON-LD with service area (Houston, Harris County), hours, and TECL license. Add a 5-question FAQ page with QAPage schema targeting 'solar installation Houston' queries.	Convert the win Surface the aggregate Google rating as a schema-marked star badge on the homepage. Add alt text to all images. Install a sticky mobile call bar so every page converts on a tap.

09 BOTTOM LINE

THE ONE THING THAT MATTERS MOST

Luxury Energy Solar has real credentials, a licensed team, and genuine five-star reviews, all sitting behind a Squarespace template that hides the phone number on a subpage, has no H1, and ships zero structured data to Google or AI assistants. The single highest-leverage move is adding a tap-to-call number to the homepage and a LocalBusiness schema block — two changes that cost an afternoon but immediately connect the company's earned reputation to the search and AI channels where Houston homeowners are actively looking for solar installers right now.
