Everything Outdoors of Tulsa

everythingoutdoorstulsa.com

AGENT-BLIND

AI-INVISIBLE

OVERALL GRADE

C-

AVG 4.8 / 10

A ten-dimension audit of your website's ability to win customers across **search, mobile, AI assistants, and local discovery**. Every finding below is observed directly from your live site — nothing estimated.

02 DIMENSIONAL SCORING

Design / UX		6/10	Mobile Experience		6/10
Technical SEO		5/10	Local SEO		5/10
Content / E-E-A-T		6/10	AEO · Answer Engine		3/10
GEO · Generative		3/10	Agentic Readiness		4/10
Accessibility		6/10	CRO		4/10

Bars: **green** = strong (7–10) · **amber** = needs work (4–6) · **red** = critical (1–3). The three lowest dimensions are where you're losing the most customers right now — detailed on the following pages.

03 FORGE REPORT

WHAT'S WORKING

- **Real project imagery, well-labelled.** The homepage carries 36 genuine project photos and 35 of them carry descriptive alt text — already ahead of most trade sites in the area for both accessibility and image search. (Design 6)
- **Award-backed social proof up top.** The hero leads with "Voted Best of Houzz in Customer Service for the last 5 years" — a real, verifiable trust signal that most competitors can't claim.
- **Structured-data foundation already exists.** Yoast emits Organization, WebSite and BreadcrumbList JSON-LD with your social profiles linked — the scaffolding for AI visibility is half-built, it just needs completing and correcting.

WHAT'S COSTING YOU LEADS NOW

- **Business name is misspelled inside your own schema.** The Organization JSON-LD names you "Evenrything Outdoors of Tulsa." That typo is the exact string Google and AI assistants read as your entity name — it weakens every knowledge-graph and brand match. (Tech SEO 5)
- **No tap-to-call on the homepage.** The phone (918-236-9173) is shown as plain text on the home page but never wrapped in a tel: link, so mobile visitors can't tap to call; only the deeper Contact page has a working tel: link. (CRO 4)
- **Contact runs through a personal Gmail.** The only email on the Contact page is jaketurner002@gmail.com — a personal address, not a branded inbox. It reads as less trustworthy to customers and is invisible to entity-matching.
- **Incomplete entity data for AI.** The Organization schema has no telephone, address or areaServed, and there is no LocalBusiness or FAQ markup — so assistants can't reliably extract who you are, where you work, or how to reach you. (AEO/GEO 3)

04 YOUR AI SEARCH BLIND SPOT

AEO + GEO · HOW MACHINES READ YOUR SITE

When a Tulsa homeowner asks an AI assistant — ChatGPT, Gemini, or Google's AI overview — **"who builds outdoor kitchens and patios near Tulsa?"**, your site gives the model very little it can quote with confidence. There is no FAQ schema, no answer-shaped paragraphs, and the entity data that does exist is incomplete and spells your name wrong.

Your content reads as marketing prose rather than extractable answers, and your Organization record is missing phone, address and service area. So generative engines hedge or skip past you in favour of competitors whose pages are structured for retrieval. As more searches start inside an assistant, **this is the gap that quietly removes you from the shortlist.**

// machine-readiness probe — answer & generative engines

COMBINED AI VISIBILITY

A blended index of how discoverable you are to answer engines, generative search, and autonomous agents — the AI layer that increasingly sits between customers and local businesses.

05 AGENTIC & FUTURE READINESS

CAN AN AUTONOMOUS AI AGENT ACTUALLY USE YOUR SITE?

A growing share of bookings will soon be made by AI agents acting for a customer — pulling your phone number, service area and hours automatically. We probed whether your site exposes that information in a machine-readable way:

An AI booking agent landing on your homepage would find your phone only as plain text (no tel: hook) and no structured NAP, so it would **struggle to extract and act on your contact details** and likely move to a competitor it can read cleanly. The Contact page is better, but agents rarely dig that deep.

```
// agent-access probe
Semantic HTML5 landmarks ..... PARTIAL    builder/WordPress divs; few nav/section
roles
robots.txt bot permissions .... UNVERIFIED
llms.txt ..... ABSENT
Machine-readable NAP ..... PARTIAL    tel:/mailto on Contact only; not on
homepage; not in schema
Tap-to-call & mailto hooks .... PARTIAL    absent on homepage, present on Contact page
```

buried

THE DISCONNECT BETWEEN REPUTATION AND VISIBILITY

You hold a strong **4.8 rating across 80 Google reviews**, reinforced by a 5-year Best of Houzz customer-service award — social proof most Tulsa competitors can't match. Yet with your name misspelled in your own schema and your phone, address and service area missing from structured data, that reputation is **weaker than it should be at the exact moment someone searches**.

Your real edge is consistency of service, recognised publicly by Houzz five years running. Surfacing that proof and your live review count on the homepage — and fixing the entity signals underneath it — is the fastest way to convert reputation into ranked, trackable calls.

07 ACCESSIBILITY & COMPLIANCE

SCORE 6 / 10 · INCLUDED BECAUSE IT'S BELOW THRESHOLD

A portion of your potential customers — and Google's own ranking systems — depend on an accessible site. We found gaps that are both a legal-exposure risk and a quiet ranking drag:

```
// accessibility & compliance probe
Image alt text ..... ADEQUATE    35 of 36 homepage images carry alt text
ARIA landmark roles ..... MINIMAL  WordPress/builder divs; no <nav>/<section>
Descriptive page H1 ..... SPARSE   homepage H1 is a promo banner, not a descriptive
heading
Branded contact email .... MINIMAL   uses a personal Gmail address
Cookie consent notice .... ABSENT
```

The quickest accessibility-and-trust win is replacing the promo-banner H1 with a real descriptive heading and adding semantic landmarks — both help screen readers and crawlers at the same time.

08 THE 30-DAY PLAN

WEEK 1

Fix the name & the call path

Correct "Everyrthing" in the Organization schema and add a tap-to-call tel: link (plus a sticky mobile call bar) on the homepage.

WEEK 2

Complete the entity record

Add telephone, address and areaServed to schema, switch to LocalBusiness markup, and move contact to a branded email.

WEEK 3

Open the AI door

Add FAQ/QAPage schema and 40-60 word answer paragraphs for your core services so assistants can quote you.

WEEK 4

Convert the reputation

Surface the 4.8 Google rating and Best of Houzz award on the homepage and add a descriptive H1 and semantic landmarks.

09 BOTTOM LINE

THE ONE THING THAT MATTERS MOST

Everything Outdoors of Tulsa has a genuinely strong reputation — 4.8 stars across 80 reviews and a 5-year Best of Houzz award — sitting on a competent WordPress site whose own schema misspells the business name and whose homepage offers no tap-to-call. The single highest-leverage move is correcting the entity name and completing structured contact data while adding tap-to-call, turning a trusted brand that is currently fuzzy to Google and AI assistants into recovered, trackable inbound calls. Doing this ahead of competitors who haven't structured their data captures the AI-search window while it's still open.
