🔍 AI-INVISIBLE

& A11Y-RISK

OVERALL GRADE

C-

AVG 4.5 / 10

A ten-dimension audit of your website's ability to win customers across **search, mobile, AI assistants, and local discovery**. Every finding below is observed directly from your live site — nothing estimated.

02 DIMENSIONAL SCORING

Design / UX		6/10	Mobile Experience		6/10
Technical SEO		4/10	Local SEO		5/10
Content / E-E-A-T		7/10	AEO · Answer Engine		3/10
GEO · Generative		3/10	Agentic Readiness		2/10
Accessibility		4/10	CRO		5/10

Bars: **green** = strong (7–10) · **amber** = needs work (4–6) · **red** = critical (1–3). The three lowest dimensions are where you're losing the most customers right now — detailed on the following pages.

VERIFIED DIMENSIONS

The four dimensions measured directly from your live site.

SCORE DISTRIBUTION

How all ten dimensions fall across the risk bands.

03 FORGE REPORT

▲ WHAT'S WORKING

- **Strong credentials on display.** NABCEP certification badge, Generac Power Pro Elite Plus dealer status, and a full roster of brand logos (REC, Enphase, SolarEdge, Sol-Ark) are visible on the homepage — rare trust-builders that most local solar sites lack.
- **FAQs page with detailed, genuine answers.** A dedicated /faqs/ page covers 17 real questions — grid-tie, battery backup, sizing, cost, incentives — written in plain language by someone who clearly knows the trade. This is valuable content sitting one step from schema markup.
- **Tap-to-call phone number in the header.** The site's header displays (601) 656-6161 as a tel: link, giving mobile visitors a one-tap path to call — though the tel: URI uses backslash-escaped parentheses rather than the standard E.164 format, which may break on some devices.

▲ WHAT'S COSTING YOU LEADS NOW

- **Broken tel: link format blocks mobile callers.** The header phone renders as tel:\(601\) 656-6161 with backslash-escaped parentheses instead of tel:+16016566161. On strict-parsing mobile browsers this will not initiate a call — the most valuable single action on a solar lead site fails silently.
- **No structured data — invisible to AI and rich results.** Zero JSON-LD found on any page: no LocalBusiness/Organization schema, no FAQPage markup despite 17 answered questions, no Service-area data. Google cannot generate a knowledge panel, AI assistants cannot extract a quote, and the FAQ page earns no rich-result star in SERPs.
- **Testimonial avatar images are broken site-wide.** Every customer photo on the homepage testimonials carousel loads the Elementor placeholder image (placeholder.png) — the actual portraits never loaded. This makes the social proof section look unfinished and damages credibility at the exact moment a visitor is deciding to inquire.
- **No Google review count or rating shown on the site.** Mississippi Solar has 113 Google reviews yet none are surfaced on the website — no widget, no badge, no star count. Visitors in the buying window see generic placeholder testimonials instead of the real, verified social proof that would close them.

04 YOUR AI SEARCH BLIND SPOT

AEO + GEO · HOW MACHINES READ YOUR SITE

When a Mississippi homeowner asks ChatGPT or Google's AI Overview **"who is the best licensed solar installer near Jackson, MS?"**, the AI pulls its answer from structured, extractable page content. Mississippi Solar's site has strong expertise in prose — but zero FAQ schema, no Organization JSON-LD, and no answer-length paragraphs the model can quote. The 17-question FAQ page is invisible to every AI retrieval system.

As AI-generated answers increasingly dominate the top of solar search results, sites with QAPage schema and entity markup will be cited by name while the rest are omitted entirely. **Every week without schema is a week competitors can claim that real estate first.**

COMBINED AI VISIBILITY

A blended index of how discoverable you are to answer engines, generative search, and autonomous agents — the AI layer that increasingly sits between customers and local businesses.

05 AGENTIC & FUTURE READINESS

CAN AN AUTONOMOUS AI AGENT ACTUALLY USE YOUR SITE?

AI booking agents and voice assistants already route home-service quote requests autonomously — pulling a company's phone number, service zip codes, and hours from structured page signals. We checked whether mssolar.net exposes that data in machine-readable form.

The site has **no llms.txt**, **no machine-readable NAP block**, **no Organization schema**, and a **broken tel: URI**. An AI agent attempting to collect a solar quote on behalf of a homeowner would fail to extract a valid phone number and silently move to the next result. The content is strong; the machine layer is simply missing.

```
// agent-access probe
Semantic HTML5 landmarks ..... PARTIAL  Elementor div-heavy; limited section/nav
roles
robots.txt bot permissions .... UNVERIFIED
llms.txt ..... ABSENT
Machine-readable NAP ..... ABSENT  Name/address/phone in plain text only, no
schema
Tap-to-call & mailto hooks .... PARTIAL  tel: link present but malformed (backslash-
escaped)
```

06 LOCAL COMPETITIVE POSITION

BUSINESS	GOOGLE	MOBILE CALL	SCHEMA / AI-READY	NAME / DOMAIN	OVERALL
Mississippi Solar LLC (you)	4.9★ · 103	~	×	✓	C+
Panels Up Solar LLC	5.0★ · 98	✓	×	✓	B-
Efficient Power & Light	4.9★ · 56	✓	×	✓	C+

06 LOCAL POSITION & REPUTATION

4.9★

GOOGLE RATING

103

REVIEWS

4

LOCAL COMPETITORS

#3

MAP-PACK RANK

REPUTATION VS. SEARCH VISIBILITY

Reputation strength

Search visibility

THE DISCONNECT BETWEEN REPUTATION AND VISIBILITY

Mississippi Solar holds a **4.9 Google rating across 103 reviews** — the third-strongest review footprint among verified Mississippi solar installers, behind Panels Up Solar (5.0 / 98) and Apex Electric (5.0 / 75). That is a genuinely strong reputation for a rural-based installer serving a statewide market from Eupora, MS.

The disconnect: that 4.9 rating appears nowhere on mssolar.net. No badge, no widget, no star count — while Panels Up Solar and Solar Alternatives both surface reviews prominently. When a prospective buyer opens two tabs, Mississippi Solar's credibility is invisible at the moment it matters most.

07 ACCESSIBILITY & COMPLIANCE

SCORE 4 / 10 · INCLUDED BECAUSE IT'S BELOW THRESHOLD

A portion of your potential customers — and Google's own ranking systems — depend on an accessible site. We found gaps that are both a legal-exposure risk and a quiet ranking drag:

```
// accessibility & compliance probe
Image alt text ..... SPARSE    Logo and hero images have no alt text
observed
ARIA landmark roles ..... MINIMAL  Elementor builder outputs div containers,
not semantic landmarks
Colour-contrast (text vs bg) .... ADEQUATE
Cookie consent notice ..... ABSENT
```

Priority fix: add descriptive alt text to certification badge images and the hero slider — these carry the strongest trust signals and are currently invisible to screen readers and image-search indexing.

08 THE 30-DAY PLAN

WEEK 1

Fix the phone link

Correct the tel: URI from backslash-escaped format to tel:+16016566161 across all pages — one five-minute fix that restores the most valuable mobile conversion action on the site.

WEEK 2

Surface your real reviews

Embed a Google review widget or manual rating badge (113 reviews) on the homepage and service pages so visitors see real social proof instead of placeholder avatar images.

WEEK 3

Open the AI door

Add LocalBusiness + FAQPage JSON-LD schema: wrap the existing 17 FAQ answers in QAPage markup and add Organization entity data with service-area zip codes so Google and AI assistants can cite Mississippi Solar by name.

WEEK 4

Convert the credibility

Fix broken testimonial avatar images, add alt text to certification badges, and place a sticky mobile call bar — turning the credentials already on the page into a seamless close for visiting prospects.

09 BOTTOM LINE

THE ONE THING THAT MATTERS MOST

Mississippi Solar has the real-world credibility — NABCEP certification, 113 Google reviews, 17 detailed FAQs, strong brand partnerships — of a market leader, packaged in a site where the phone link is broken, the reviews are hidden, and every AI retrieval system sees a blank. The single highest-leverage move is fixing the tel: URI and adding FAQ + LocalBusiness schema, converting already-written content into the structured signals that both Google and AI assistants use to recommend installers. Done in a weekend, those two changes alone would surface Mississippi Solar in AI-generated answers and rich SERP results for every 'solar installer near Jackson MS' query the site is currently invisible for.
