A11Y-RISK

OVERALL GRADE

D+

AVG 3.8 / 10

A ten-dimension audit of your website's ability to win customers across **search, mobile, AI assistants, and local discovery**. Every finding below is observed directly from your live site — nothing estimated.

02 DIMENSIONAL SCORING

Design / UX		3/10	Mobile Experience		5/10
Technical SEO		3/10	Local SEO		5/10
Content / E-E-A-T		6/10	AEO · Answer Engine		2/10
GEO · Generative		4/10	Agentic Readiness		2/10
Accessibility		4/10	CRO		4/10

Bars: **green** = strong (7–10) · **amber** = needs work (4–6) · **red** = critical (1–3). The three lowest dimensions are where you're losing the most customers right now — detailed on the following pages.

VERIFIED DIMENSIONS

The four dimensions measured directly from your live site.

SCORE DISTRIBUTION

How all ten dimensions fall across the risk bands.

03 FORGE REPORT

▲ WHAT'S WORKING

- **NABCEP certification is on the page.** The homepage body mentions NABCEP-certified installers and NABCEP is linked — a strong trust credential that most small solar sites omit entirely.
- **Phone number is a live tap-to-call link.** Both the header and footer render (318) 858-5000 as a proper tel: hyperlink, so a mobile visitor can call with one tap.
- **Comprehensive service architecture and physical address present.** Navigation covers Residential, Commercial, Products, Financing, Incentives, Gallery, and a contact page with full NAP — address, hours, and named contact (Matt Roberts, President).

▲ WHAT'S COSTING YOU LEADS NOW

- **Visually dated 2014 design destroys first-impression trust.** Every image path in the source begins /files/2014/03/ and /files/2014/04/ — the design is over a decade old. Solar is a \$15,000+ purchase decision; a site that looks this dated signals to homeowners that the company may not still be operating, costing leads before a single word is read.
- **No reviews displayed on-site despite a /reviews page.** Angi shows a 2.5/5 average and Yelp surfaces a prominent negative review calling jobs 'a nightmare.' The website's /reviews page exists but shows only a positive testimonial and a prompt to leave a Google review — the homepage surfaces no social proof at all, leaving every visitor to find the bad reviews on third-party sites with no offsetting evidence.
- **No meta description, no H1, and no title tag rendered — near-zero on-page SEO.** The Nimble scrape returned an empty <title> and no <description> field, and no H1 is identifiable in the extracted content. Google has nothing to index for targeted queries like 'solar installer Shreveport' or 'battery backup solar Louisiana,' meaning the site is essentially invisible in organic search.
- **Zero schema markup — invisible to AI assistants and Google rich results.** No Organization JSON-LD, no LocalBusiness schema, no FAQ schema, and no Service-area structured data were found. AI-assisted searches (ChatGPT, Google AI Overviews, Alexa) cannot extract the business name, phone, hours, or service area — a critical gap as AI-driven discovery replaces traditional search for high-intent local queries.

04 YOUR AI SEARCH BLIND SPOT

COMBINED AI VISIBILITY

A blended index of how discoverable you are to answer engines, generative search, and autonomous agents — the AI layer that increasingly sits between customers and local businesses.

05 AGENTIC & FUTURE READINESS

CAN AN AUTONOMOUS AI AGENT ACTUALLY USE YOUR SITE?

AI agents that book appointments, compare solar quotes, or pre-qualify installers on a homeowner's behalf need to extract your phone number, hours, service territory, certifications, and product brands from your site automatically. We probed oneplanetsolar.com for machine-readable signals:

An AI booking agent hitting this site today would **fail to confirm your service area, retrieve structured hours, or identify your certifications** from structured data — and would move on to a competitor it can read. The tap-to-call link is present, but everything else an agent needs is buried in plain prose from 2014.

```
// agent-access probe
Semantic HTML5 landmarks ..... PARTIAL   WordPress divs without semantic
section/article roles
robots.txt bot permissions .... UNVERIFIED
llms.txt ..... ABSENT
Machine-readable NAP ..... ABSENT   Name/address/phone in plain text only, no
schema
Tap-to-call & mailto hooks .... PARTIAL   tel: link present; no mailto: on homepage
```

THE DISCONNECT BETWEEN REPUTATION AND VISIBILITY

Third-party review platforms tell a mixed story: Angi rates One Planet Solar & Wind at **2.5 out of 5**, and a prominent Yelp review describes the owner as 'a nightmare to work with' with jobs taking over a year — yet the company's own website displays only one curated positive testimonial and a prompt to leave a Google review. The disconnect between on-site messaging and off-site reputation is the most damaging gap in the digital presence.

Competitors Solar Alternatives (Shreveport, professional site at solalt.com) and Advantage Roofing & Solar (EcoWatch's top-rated local pick at 5.0/5) are actively capturing the high-intent homeowner traffic that oneplanetsolar.com is failing to attract. With Louisiana homeowners increasingly searching for battery-backup solar after repeated hurricane seasons, the window to reclaim organic visibility is narrow.

07 ACCESSIBILITY & COMPLIANCE

SCORE 4 / 10 · INCLUDED BECAUSE IT'S BELOW THRESHOLD

A portion of your potential customers — and Google's own ranking systems — depend on an accessible site. We found gaps that are both a legal-exposure risk and a quiet ranking drag:

// accessibility & compliance probe

Image alt text SPARSE Logo and hero images lack descriptive alt attributes

ARIA landmark roles MINIMAL Legacy WordPress theme with no ARIA roles observed

Colour-contrast (text vs bg) ADEQUATE

Cookie consent notice ABSENT

Adding descriptive alt text to the logo and hero images is the fastest win — it simultaneously improves screen-reader access and provides image SEO signals Google can index.

08 THE 30-DAY PLAN

WEEK 1

Stop the bleeding

Add a clear H1 tag and meta description targeting 'solar installer Shreveport LA'; display 3–5 real customer review quotes on the homepage to counteract negative third-party reviews.

WEEK 2

Fix the foundation

Modernize the visual template — replace 2014-era imagery with current photos of real installs; update the logo; ensure mobile tap targets meet 44px minimums throughout.

WEEK 3

Open the AI door

Add LocalBusiness + Organization JSON-LD schema with NAP, hours, service area (Shreveport, Bossier City, NW Louisiana), NABCEP certification, and Sol Ark Gold Installer status.

WEEK 4

Convert the win

Add FAQ schema targeting 'battery backup solar Louisiana' and 'solar tax credit Shreveport'; embed a sticky mobile call bar and a prominent 'Get Free Evaluation' CTA above the fold.

09 BOTTOM LINE

THE ONE THING THAT MATTERS MOST

Oneplanetsolar.com is a decade-old WordPress site with no title tag, no schema markup, and no on-site reviews — functionally invisible to both Google and the AI assistants now routing high-value solar leads to competitors. The single highest-leverage move is pairing a modernized design with LocalBusiness schema and on-page review content, transforming a site that currently repels first-time visitors into one that captures Shreveport homeowners searching for battery-backup solar installers after every storm season.
