

AUDIT TARGET

01

PowerSol USA

powersolusa.com

OVERALL GRADE

C

AVG 5.2 / 10

A ten-dimension audit of your website's ability to win customers across **search, mobile, AI assistants, and local discovery**. Every finding below is observed directly from your live site — nothing estimated.

02 DIMENSIONAL SCORING

Design / UX		7/10	Mobile Experience		7/10
Technical SEO		5/10	Local SEO		5/10
Content / E-E-A-T		6/10	AEO · Answer Engine		3/10
GEO · Generative		4/10	Agentic Readiness		4/10
Accessibility		5/10	CRO		6/10

Bars: **green** = strong (7–10) · **amber** = needs work (4–6) · **red** = critical (1–3). The three lowest dimensions are where you're losing the most customers right now — detailed on the following pages.

VERIFIED DIMENSIONS

The four dimensions measured directly from your live site.

SCORE DISTRIBUTION

How all ten dimensions fall across the risk bands.

03 FORGE REPORT

WHAT'S WORKING

- **Modern, real-photo build.** A current WordPress/Divi site with genuine Florida installation photography and a clean service architecture (Services, Projects, Savings, Blog, Contact) — already ahead of most trade sites in the Tampa market. (Design 7)
- **Tap-to-call wired in.** The header phone is a real tel: link (tel:+18558476527) and the homepage routes to both a contact form and a savings estimator, so mobile intent has somewhere to land. (CRO 6)
- **Credentials and FAQ content on the page.** The footer states the Florida Master Electrical Contractor license (EC13012024), and a full FAQ section answers real buyer questions on cost, savings and net metering. (Content/E-E-A-T 6)

WHAT'S COSTING YOU LEADS NOW

- **FAQ answers exist but aren't machine-readable.** The homepage has a strong, answer-shaped FAQ ("How much does solar cost?", "How does net metering work?") but ships no FAQPage schema, so Google and AI assistants can't lift those answers into AI Overviews or featured snippets. (AEO 3)
- **No LocalBusiness or Organization schema.** Your name, the 600 N Willow Ave Tampa address, phone and service area sit in plain page text only — the JSON-LD is generic Yoast WebPage/WebSite/Breadcrumb. Nothing tells a crawler or booking agent "this is a solar contractor in Tampa." (Local SEO 5 / Agentic 4)
- **Homepage meta description is missing.** There is no <meta name="description">, so Google writes its own snippet for your most important page — you don't control the first line a searcher reads. (Tech SEO 5)
- **Image alt text is sparse.** Of 16 homepage images only 3 carry real alt text and 12 are empty — project and product photos go undescribed to screen readers and to image search. (Accessibility 5)

04 YOUR AI SEARCH BLIND SPOT

AEIOU + GEO · HOW MACHINES READ YOUR SITE

When a Tampa homeowner asks an AI assistant — ChatGPT, Gemini, or Google's AI Overview — "who installs solar panels near Tampa and is it worth it?", your site already has the answers written out in the FAQ. The problem is they're wrapped in marketing markup, not FAQPage schema, so the model has nothing structured to quote back.

You also publish no Organization or LocalBusiness JSON-LD, so generative engines can't confirm who you are, where you work, or that you're a licensed Florida electrical contractor. The content is there; the machine-readable layer that would let AI cite you is what's missing — and that gap quietly hands the answer to a competitor.

COMBINED AI VISIBILITY

A blended index of how discoverable you are to answer engines, generative search, and autonomous agents — the AI layer that increasingly sits between customers and local businesses.

05 AGENTIC & FUTURE READINESS

CAN AN AUTONOMOUS AI AGENT ACTUALLY USE YOUR SITE?

A growing share of solar leads will soon be initiated by AI agents acting for a homeowner — pulling a contractor's phone, address, service area and license automatically. We checked whether your site exposes those facts in a machine-readable way.

An agent can find your tap-to-call number, but your name, Tampa address and Florida-only service area live only in plain text with no Organization or LocalBusiness schema and no llms.txt. A booking agent would have to guess your service boundary instead of reading it — friction a competitor with structured NAP won't have.

```
// agent-access probe
Semantic HTML5 landmarks ..... PARTIAL   Divi builder divs; limited section/nav
roles
robots.txt bot permissions ..... UNVERIFIED
llms.txt ..... ABSENT
Machine-readable NAP ..... ABSENT   address/phone in plain text, no schema
Tap-to-call & contact hooks .... PARTIAL   tel: present; no mailto anywhere
```

06 LOCAL COMPETITIVE POSITION

MAP-PACK RANK

REPUTATION VS. SEARCH VISIBILITY

Reputation strength

Search visibility

THE DISCONNECT BETWEEN REPUTATION AND VISIBILITY

You hold a flawless **5.0 rating across 39 reviews** on Google — rare in Tampa solar, where the larger players sit at 4.5–4.9. That reputation is real social proof, but with no LocalBusiness schema and no homepage meta description, it isn't reinforced by the structured signals Google leans on to rank a local contractor.

Your footer already names the license (EC13012024) and two real Tampa locations (600 N Willow Ave HQ and the Cigar City Solar retail store). Marking that up as LocalBusiness/Organization data would turn a 5-star reputation that's currently invisible to crawlers and AI into a ranking and citation asset.

07 ACCESSIBILITY & COMPLIANCE

SCORE 5 / 10 · INCLUDED BECAUSE IT'S BELOW THRESHOLD

A portion of your potential customers — and Google's own ranking systems — depend on an accessible site. We found gaps that are both a legal-exposure risk and a quiet ranking drag:

```
// accessibility & compliance probe
Image alt text ..... SPARSE    3 of 16 images have real alt; 12 empty
ARIA landmark roles ..... MINIMAL  Divi builder divs
Zoom / user-scalable ..... MINIMAL  viewport sets maximum-scale=1, user-scalable=0 -
pinch-zoom disabled
Privacy policy ..... ADEQUATE    real /privacy-policy/ page present
Cookie consent notice .... ABSENT
```

Re-enabling pinch-zoom (drop user-scalable=0) and adding alt text to the project and product images are the priority fixes — both are low-effort and remove a real barrier for low-vision visitors while helping image search.

08 THE 30-DAY PLAN

WEEK 1

Make the answers quotable

Add FAQPage schema to the existing homepage FAQ and write a homepage meta description so Google and AI assistants can lift your answers.

WEEK 2

Become a real entity to crawlers

Add LocalBusiness/Organization JSON-LD with NAP, license EC13012024, hours and Florida service area.

WEEK 3

Clean up accessibility

Add alt text to project and product images and re-enable pinch-zoom in the viewport tag.

WEEK 4

Convert the 5.0

Surface the 5.0 / 39-review reputation on the homepage and add a mailto path so AI agents and humans have a non-form contact option.

09 BOTTOM LINE

THE ONE THING THAT MATTERS MOST

PowerSol USA runs a genuinely solid, modern Tampa solar site with a 5.0 rating, a visible FAQ and a stated electrical-contractor license — but it ships no LocalBusiness, Organization or FAQPage schema and no homepage meta description. The single highest-leverage move is adding that structured-data layer, so the answers and credentials you already publish become quotable by Google's AI Overviews and readable by booking agents. For a contractor already winning on reputation, that one fix is the difference between being found at the moment of an AI search and being skipped for a competitor whose page is machine-readable.
