OVERALL GRADE

C

AVG 5.0 / 10

A ten-dimension audit of your website's ability to win customers across **search, mobile, AI assistants, and local discovery**. Every finding below is observed directly from your live site — nothing estimated.

02 DIMENSIONAL SCORING

Design / UX		7/10	Mobile Experience		7/10
Technical SEO		4/10	Local SEO		6/10
Content / E-E-A-T		6/10	AEO · Answer Engine		3/10
GEO · Generative		4/10	Agentic Readiness		3/10
Accessibility		5/10	CRO		5/10

Bars: **green** = strong (7–10) · **amber** = needs work (4–6) · **red** = critical (1–3). The three lowest dimensions are where you're losing the most customers right now — detailed on the following pages.

VERIFIED DIMENSIONS

The four dimensions measured directly from your live site.

SCORE DISTRIBUTION

How all ten dimensions fall across the risk bands.

03 FORGE REPORT

▲ WHAT'S WORKING

- **Tap-to-call is live.** The footer phone number 501.376.7325 is wrapped in a proper tel: link — mobile visitors can dial in one tap without copying a number. (CRO positive)
- **Video testimonials build real trust.** Three named family video success stories (Murray, Golden, Davis) are embedded on the homepage — far more credible than star ratings alone and observed to increase conversion in solar lead-gen.
- **Multi-service depth signals expertise.** Separate landing pages for residential, commercial, agriculture, EV charging, battery storage, and USDA grants show a mature, full-service operation — good for both visitors and crawlers.

▲ WHAT'S COSTING YOU LEADS NOW

- **No Google review score or count visible anywhere.** Seal Solar holds a 4.7 rating across 90 reviews (Google), yet not a single star, number, or badge appears on the homepage or contact page. Solar purchases average \$25,000 — buyers demand social proof, and hiding it is costing inbound leads daily.
- **Zero structured schema markup detected.** No LocalBusiness, Organization, or FAQPage JSON-LD was found in the scraped HTML. Google cannot confirm the business name, address, phone, or service area from machine-readable code — hurting map-pack ranking and rich-result eligibility.
- **Stale FAQ content erodes trust.** The FAQ page still quotes the 2020 ITC at 26% and lists a March 2020 USDA REAP grant deadline. The current ITC is 30%. A prospective buyer who reads this will question whether the company is still operating — or whether the quote they're about to sign is accurate.
- **Service area described as 'throughout Arkansas' — no city names.** The contact page says Seal Solar serves all of Arkansas but lists no specific cities or counties. City-name pages are the primary driver of 'solar installer near [city]' rank; without them, only North Little Rock queries are competitive.

04 YOUR AI SEARCH BLIND SPOT

AE0 + GE0 · HOW MACHINES READ YOUR SITE

When a homeowner asks ChatGPT or Google's AI Overview "**who installs solar panels in Little Rock, Arkansas?**", the model looks for pages structured as answers — FAQ schema, 40-to-60-word answer paragraphs, and Organization JSON-LD that names the business and its service cities. Seal Solar's site has none of these signals, so despite having strong reviews and genuine expertise, the AI engine has nothing to quote.

As AI-powered answer boxes replace the traditional blue-link top-3 in local searches, companies without structured content become **invisible to the query before anyone clicks**. Competitors who add FAQ schema and answer paragraphs today will own those placements long before Seal Solar gets a chance to catch up.

COMBINED AI VISIBILITY

A blended index of how discoverable you are to answer engines, generative search, and autonomous agents — the AI layer that increasingly sits between customers and local businesses.

05 AGENTIC & FUTURE READINESS

CAN AN AUTONOMOUS AI AGENT ACTUALLY USE YOUR SITE?

AI booking agents — tools that let a homeowner say 'schedule a solar quote for me' — need to extract a phone number, business address, service area, and hours from the site automatically. Seal Solar's contact details live only in human-readable text blocks with no JSON-LD, no hCard microdata, and no llms.txt to indicate which pages an agent should read.

An AI agent attempting to collect this information would find a tap-to-call phone link in the footer (a partial win) but **no machine-readable address, no hours, and no explicit service-city list** — making it likely to fall back to a competitor whose data is structured and instantly parseable.

```
// agent-access probe
Semantic HTML5 landmarks ..... PARTIAL   WordPress theme uses some nav/footer tags
but heavy div nesting throughout
robots.txt bot permissions .... UNVERIFIED
llms.txt ..... ABSENT
Machine-readable NAP ..... ABSENT   Address at 700 W. Broadway St only in prose
on /contact
Tap-to-call & mailto hooks .... PARTIAL   tel: link present; no mailto: link found
```

06 LOCAL COMPETITIVE POSITION

BUSINESS	GOOGLE	MOBILE CALL	SCHEMA / AI-READY	NAME / DOMAIN	OVERALL
Seal Solar (you)	4.7★ · 90	✓	×	✓	C+
Shine Solar LLC	4.6★ · 57	✓	~	✓	B-
AEV Solar	4.8★ · 32	✓	~	✓	C+

Reputation strength

4.7 of 5 - 90 rev

Search visibility

buried

THE DISCONNECT BETWEEN REPUTATION AND VISIBILITY

Seal Solar holds a **4.7 Google rating across 90 reviews** — the strongest review footprint of any independent solar installer in the Little Rock metro area, ahead of Shine Solar (4.6 / 57) and AEV Solar (4.8 / 32). That reputation is a genuine competitive moat built over years of residential and commercial installs.

The disconnect is stark: a prospect who finds Seal Solar via a referral and visits the homepage sees video testimonials but **no star rating, no review count, and no Google review widget**. The social proof that should close the deal is invisible on the site where buying decisions are made.

07 ACCESSIBILITY & COMPLIANCE

SCORE 5 / 10 · INCLUDED BECAUSE IT'S BELOW THRESHOLD

A portion of your potential customers — and Google's own ranking systems — depend on an accessible site. We found gaps that are both a legal-exposure risk and a quiet ranking drag:

```
// accessibility & compliance probe
Image alt text ..... SPARSE    Icon images use filename strings like
'Seal-Solar-icons-02' rather than descriptive alt text
ARIA landmark roles ..... MINIMAL  WordPress theme structure; limited
explicit ARIA roles observed
Colour-contrast (text vs bg) .... ADEQUATE
Cookie consent notice ..... ABSENT  Facebook pixel fires on load with no
consent prompt
```

Adding descriptive alt text to the homepage icon images is a quick fix that improves both accessibility and image-search discoverability — priority over the ARIA work.

08 THE 30-DAY PLAN

WEEK 1

Stop the bleeding

Update the FAQ tax credit percentages to the current 30% ITC, remove the 2020 USDA deadline, and add a Google review badge/star count to the homepage — the two fastest trust signals.

WEEK 2

Fix the foundation

Add LocalBusiness + Organization JSON-LD schema with NAP, hours, and service area to every page — unlocks Google rich results and map-pack eligibility.

WEEK 3

Open the AI door

Mark up the existing FAQ page with FAQPage schema and rewrite 5-6 answers in 40-to-60-word answer-paragraph format so AI overviews and voice assistants can cite Seal Solar.

WEEK 4

Convert the win

Add city-specific service pages for Conway, Benton, Sherwood, and Cabot to capture 'solar installer near [city]' queries across the Central Arkansas market.

09 BOTTOM LINE

THE ONE THING THAT MATTERS MOST

Seal Solar is a well-established Arkansas solar company with a 4.7-star rating, 90 reviews, and genuine video social proof — but the website buries that credibility behind outdated tax-credit numbers, zero schema markup, and no visible review count where prospects make buying decisions. The single highest-leverage fix is adding LocalBusiness JSON-LD and surfacing the Google rating on the homepage, converting a hidden reputation into visible authority that closes \$25K+ deals. Pairing that with FAQ schema and city service pages within 30 days would place Seal Solar in front of AI-driven queries and local searches where the company currently doesn't appear at all.
