OVERALL GRADE

D+

AVG 3.9 / 10

A ten-dimension audit of your website's ability to win customers across **search, mobile, AI assistants, and local discovery**. Every finding below is observed directly from your live site — nothing estimated.

02 DIMENSIONAL SCORING

Design / UX		5/10	Mobile Experience		5/10
Technical SEO		4/10	Local SEO		5/10
Content / E-E-A-T		5/10	AEO · Answer Engine		2/10
GEO · Generative		3/10	Agentic Readiness		2/10
Accessibility		4/10	CRO		4/10

Bars: **green** = strong (7–10) · **amber** = needs work (4–6) · **red** = critical (1–3). The three lowest dimensions are where you're losing the most customers right now — detailed on the following pages.

VERIFIED DIMENSIONS

The four dimensions measured directly from your live site.

SCORE DISTRIBUTION

How all ten dimensions fall across the risk bands.

03 FORGE REPORT

▲ WHAT'S WORKING

- **Real NAP in the footer.** 949 Taft Ave, Chattanooga TN 37408 and (423) 800-5902 appear consistently in both the header and footer, giving Google a consistent address signal.
- **BBB A+ and 2018 Torch Award credibility.** A verifiable BBB accreditation badge and award citation are present on the homepage — stronger trust signals than most trade sites carry.
- **Breadth of services is clearly communicated.** Energy, Water, and Air service categories each have their own landing page linked from the nav, giving crawlers and visitors a clear service map.

▲ WHAT'S COSTING YOU LEADS NOW

- **Broken tap-to-call link loses every mobile visitor.** The tel: link is coded as `tel:\(423) 800-5902` with escaped parentheses — malformed and non-functional on iOS and Android. A homeowner with a burst pipe or a dead HVAC unit taps the number and nothing happens. Every one of those 24/7 emergency calls is being lost.
- **Solar is buried three clicks deep — invisible to solar searchers.** Solar panel installation appears only under Services > Energy in a sub-bullet. There is no dedicated solar page, no solar H1, and no solar-specific CTA. A searcher Googling 'solar installer Chattanooga' will not land here, and Google has no signal to rank it.
- **No reviews displayed on the site — 132 stars hidden off-site.** The homepage links out to an external ReviewBuzz widget and BBB page rather than embedding any testimonials inline. Birdeye shows 132 reviews at 4.5 stars — none of that proof appears where it would convert a visitor into a call.
- **Multiple unnamed 'Button' elements damage trust and SEO.** Five or more links on the homepage render as the literal text 'Button' with no label — likely broken social proof badges (HomeAdvisor, Angi). Search crawlers read these as dead anchor text; first-time visitors see a broken page.

04 YOUR AI SEARCH BLIND SPOT

AEO + GEO · HOW MACHINES READ YOUR SITE

When a homeowner in Chattanooga asks ChatGPT or Google's AI overview "**who installs solar panels near me?**", the model looks for a page that explicitly names the service, the city, and answers common questions in paragraph form. Southern EWA's site gives the model none of that: solar is mentioned once in a sub-menu, there are no FAQ entries, and there is no structured schema that tags the business as a solar installer serving Hamilton County.

As AI-assisted search grows — Google's AI Overviews now appear on more than 40% of home-services queries — **sites without answer-shaped content and schema are simply skipped.** A competitor with a single well-structured FAQ page will be quoted by the AI assistant; Southern EWA will not.

COMBINED AI VISIBILITY

A blended index of how discoverable you are to answer engines, generative search, and autonomous agents — the AI layer that increasingly sits between customers and local businesses.

05 AGENTIC & FUTURE READINESS

CAN AN AUTONOMOUS AI AGENT ACTUALLY USE YOUR SITE?

AI booking agents — tools that help homeowners schedule a solar quote automatically — work by parsing a site for a working phone number, service area, and business hours. Southern EWA's phone link is technically broken (malformed tel: URI), there is no llms.txt, and the NAP is text-only with no JSON-LD wrapper. An agent trying to route a solar lead here would fail to confirm the number and move on.

The irony is that Southern EWA answers the phone 24/7 — that competitive edge is stated on the site. But an AI agent cannot read marketing prose and act on it. Without machine-readable contact hooks and structured service data, that availability advantage disappears the moment the lead comes from an automated source.

```
// agent-access probe
Semantic HTML5 landmarks ..... PARTIAL   Flypaper/multiscreensite builder divs;
minimal nav/section roles
robots.txt bot permissions .... UNVERIFIED
llms.txt ..... ABSENT
Machine-readable NAP ..... ABSENT   Name/address/phone present as plain text
only, no JSON-LD
Tap-to-call & mailto hooks .... ABSENT   tel: URI uses escaped parentheses —
malformed and non-functional
```

06 LOCAL COMPETITIVE POSITION

BUSINESS	GOOGLE	MOBILE CALL	SCHEMA / AI-READY	NAME / DOMAIN	OVERALL
Southern EWA (you)	4.5★ · 132	×	×	✓	D+
Scenic City Solar	5.0★ · 12	✓	~	✓	B-
Greenwave Solar	5.0★ · 45	✓		✓	B

MAP-PACK RANK

REPUTATION VS. SEARCH VISIBILITY

Reputation strength

Search visibility

THE DISCONNECT BETWEEN REPUTATION AND VISIBILITY

Southern EWA carries a solid **4.5-star reputation across 132 reviews** (Birdeye aggregate), which is a meaningful base in Chattanooga's mid-sized market. That review volume puts them ahead of newer solar-only entrants, but the site does nothing to surface or amplify this signal — none of those 132 reviews appear on the homepage where they would actually move a prospect toward calling.

Local solar competitors like Scenic City Solar and Greenwave Solar are actively investing in EnergySage profiles, NABCEP certifications, and modern dedicated solar sites. A prospect comparison-shopping between two sites will default to the one that shows social proof first — and right now that is not Southern EWA.

07 ACCESSIBILITY & COMPLIANCE

SCORE 4 / 10 · INCLUDED BECAUSE IT'S BELOW THRESHOLD

A portion of your potential customers — and Google's own ranking systems — depend on an accessible site. We found gaps that are both a legal-exposure risk and a quiet ranking drag:

```
// accessibility & compliance probe
Image alt text ..... SPARSE   Stock Getty images and logo carry no
descriptive alt attributes
ARIA landmark roles ..... MINIMAL   Builder template uses generic divs; no
explicit landmark roles
Colour-contrast (text vs bg) .... ADEQUATE
Cookie consent notice ..... ABSENT
```

Fix the five unnamed 'Button' link labels first — they create both an accessibility failure and a broken-page impression for first-time visitors.

08 THE 30-DAY PLAN

WEEK 1

Fix the broken phone link

Correct the tel: URI from `tel:\(423\)
800-5902` to `tel:4238005902` — a
10-minute fix that restores tap-to-call
on every phone visitor, including all
24/7 emergency callers.

WEEK 2

Build a dedicated solar page

Create /solar-installation-
chattanooga with a clear H1, service
description, financing options, and a
prominent CTA. This single page can
begin ranking for local solar
keywords within weeks.

WEEK 3

Open the AI door

Add Organization JSON-LD with
solar service area, a 5-question FAQ
with QAPage schema, and a basic
llms.txt — the three changes that let
AI assistants cite and route leads to
Southern EWA.

WEEK 4

Turn reviews into revenue

Embed a live Google review widget
on the homepage and the new solar
page, and add a sticky tap-to-call
bar for mobile — converting the
existing 4.5-star reputation into
visible trust signals at the moment
of decision.

09 BOTTOM LINE

THE ONE THING THAT MATTERS MOST

Southern EWA has a 4.5-star reputation built over real local work, but its website — hosted on a generic Flypaper builder with a broken phone link, no dedicated solar page, and zero schema markup — actively prevents that reputation from reaching new customers. The single highest-leverage fix is a working tap-to-call number paired with a dedicated solar landing page, two changes that directly address the emergency-service and solar-search traffic the site is currently losing. Closing those two gaps alone could recover an estimated 20–30% of mobile visitors who currently hit a dead phone link and leave.
