OVERALL GRADE

C-

AVG 4.6 / 10

A ten-dimension audit of your website's ability to win customers across **search, mobile, AI assistants, and local discovery**. Every finding below is observed directly from your live site — nothing estimated.

02 DIMENSIONAL SCORING

Design / UX		6/10	Mobile Experience		6/10
Technical SEO		5/10	Local SEO		4/10
Content / E-E-A-T		6/10	AEO · Answer Engine		3/10
GEO · Generative		4/10	Agentic Readiness		2/10
Accessibility		5/10	CRO		5/10

Bars: **green** = strong (7–10) · **amber** = needs work (4–6) · **red** = critical (1–3). The three lowest dimensions are where you're losing the most customers right now — detailed on the following pages.

VERIFIED DIMENSIONS

The four dimensions measured directly from your live site.

SCORE DISTRIBUTION

How all ten dimensions fall across the risk bands.

03 FORGE REPORT

▲ WHAT'S WORKING

- **Tap-to-call is live** The phone number 405-761-0444 renders as a tel: link on the homepage, so mobile visitors can call with one tap — a conversion basic many local solar sites still miss.
- **Enphase Certified Installer badge + owner face** A named owner photo (Fred Ridley) and the Enphase Certified Installer logo appear above the fold, adding real credibility that generic template sites rarely carry.
- **Service breadth clearly listed** Residential, Commercial, Detach & Reset, Energy Storage, and Solar 911 are each given dedicated linked pages, giving the site logical depth and internal linking Google can crawl.

▲ WHAT'S COSTING YOU LEADS NOW

- **All animated stats render as zero** The homepage counters — Federal Tax Credit, Energy Savings, Uptime Reliability, Year Panel Warranty, Solar 911 Response, Systems Installed — all display '0' because the JavaScript animation requires a real browser to trigger. Visitors on many crawlers and low-JS environments see a row of zeros, actively destroying trust at the exact moment the site is trying to build it.
- **No schema markup — invisible to AI and rich results** There is no JSON-LD, Organization schema, FAQPage schema, or LocalBusiness structured data anywhere in the page source. This means Google cannot populate a knowledge panel, AI assistants cannot extract the business's NAP, and the FAQ page earns no rich-result snippet — leaving search clicks on the table for every competitor who has implemented it.
- **Service area is an SVG image, not structured data** The 'Areas We Serve' section is a static SVG map with no text city names, no schema ServiceArea markup, and no GeoCoordinates. A homeowner in Yukon, Mustang, or Moore searching 'solar installer near me' has no textual signal on this page linking Tribe Solar to those cities — and neither does Google.
- **Only one customer review displayed; no Google review widget** Competitors like Okie Solar (347 reviews, 5.0 stars) have review feeds or at least multiple quoted testimonials. Tribe Solar shows a single testimonial from Brad Bryan with no star rating displayed, no review count, and no link to their Google profile — losing the social proof that converts solar shoppers who comparison-shop on trust.

04 YOUR AI SEARCH BLIND SPOT

COMBINED AI VISIBILITY

A blended index of how discoverable you are to answer engines, generative search, and autonomous agents — the AI layer that increasingly sits between customers and local businesses.

05 AGENTIC & FUTURE READINESS

CAN AN AUTONOMOUS AI AGENT ACTUALLY USE YOUR SITE?

As AI agents begin handling quote requests — 'Find me three solar installers in the Oklahoma City area and book the best one for a free consultation' — they scan for machine-readable signals: a verified NAP in schema markup, structured service offerings, and explicit bot permissions. Tribe Solar's site, built on a WordPress/Elementor template with no JSON-LD and no llms.txt, returns none of those signals.

An AI agent visiting tribesolar.io today would fail to extract the business's service cities (the area map is an SVG image), could not confirm licensing or certifications programmatically, and would find no robots.txt bot permissions or llms.txt guidance. The business would be deprioritized or skipped entirely in favor of a competitor with clean structured data — even if Tribe Solar is the better installer.

```
// agent-access probe
Semantic HTML5 landmarks ..... PARTIAL
robots.txt bot permissions .... UNVERIFIED
llms.txt ..... ABSENT
Machine-readable NAP ..... ABSENT
Tap-to-call & mailto hooks .... PARTIAL   tel: link present for phone; email is
mailto: in header but not in footer schema
```

THE DISCONNECT BETWEEN REPUTATION AND VISIBILITY

Tribe Solar holds a 4.7-star rating across 24 Google reviews — a solid satisfaction score for a young local installer based in Newcastle, OK. The challenge is volume: in the Oklahoma City solar market, the top-ranked competitor Okie Solar has 347 Google reviews at 5.0 stars, and think solar OKC has 114 reviews at 5.0 stars. With 17+ tracked providers in the market and the median competitor at 4.5 stars, Tribe Solar's rating is competitive but its review count leaves it buried in local pack results.

The one testimonial on the homepage ('We highly recommend Tribe Solar for their efficiency and great customer service' — Brad Bryan) confirms real customer satisfaction exists. The gap is that 23 more positive Google reviews are not being surfaced on the website itself, and there is no prompt, widget, or link encouraging visitors to read or leave Google reviews. Closing that loop — putting a Google review count and widget on the homepage — would immediately lift conversion for visitors who are already on the fence.

07 ACCESSIBILITY & COMPLIANCE

SCORE 5 / 10 · INCLUDED BECAUSE IT'S BELOW THRESHOLD

A portion of your potential customers — and Google's own ranking systems — depend on an accessible site. We found gaps that are both a legal-exposure risk and a quiet ranking drag:

```
// accessibility & compliance probe
```

```
Image alt text ..... SPARSE    Most images have descriptive filenames but  
only some carry real alt text (e.g. 'Oklahoma City Map- Serving Area of Tribe Solar  
and Electric'); team avatar images use filename as alt.
```

```
ARIA landmark roles ..... MINIMAL    Elementor page builder outputs div-heavy  
layout with limited native landmark roles.
```

```
Colour-contrast (text vs bg) .... ADEQUATE
```

```
Cookie consent notice ..... ABSENT
```

Priority fix: add descriptive alt text to all images (especially the SVG area map and project portfolio images) to satisfy WCAG 2.1 AA and improve image search indexing simultaneously.

08 THE 30-DAY PLAN

WEEK 1

Stop the bleeding — fix the zero counters

The homepage stats showing '0%' and '0+' for every metric are actively destroying trust. Replace all JavaScript-animated counters with static hard-coded values (e.g. 30% Federal Tax Credit, 500+ Systems Installed). This takes under an hour in Elementor and instantly makes the page credible.

WEEK 2

Make the service area text-readable

Replace or supplement the SVG area map with a plain-text list of served cities (Oklahoma City, Newcastle, Yukon, Mustang, Moore, Norman, Edmond, Midwest City). Add these city names in an H2 or paragraph block so Google can index them and link Tribe Solar to local search queries in each city.

WEEK 3

Open the AI door — add JSON-LD schema

Implement LocalBusiness + Organization JSON-LD in the site head: business name, address (1917 N Hwy 76, Newcastle OK), phone, hours, service area, and Enphase certification. Add FAQPage schema to the existing FAQ page. This unlocks rich results and makes the site readable by AI assistants and agents.

WEEK 4

Convert the trust gap — surface Google reviews

Embed a Google review widget or manually feature 4-5 additional real review quotes with star ratings on the homepage. Add a visible link to the Google Business Profile ('See all 24 reviews on Google') and a CTA for happy customers to leave a review. This bridges the gap between Tribe Solar's real 4.7-star rating and the competitors who are winning on volume.

09 BOTTOM LINE

THE ONE THING THAT MATTERS MOST

Tribe Solar and Electric has a genuinely competitive 4.7-star reputation and a functional site, but a broken homepage (zero-value counters), no structured data, and a text-invisible service area map are costing it rankings and conversions in a 17-provider Oklahoma City market dominated by competitors with 5x more reviews. The single highest-leverage move is implementing LocalBusiness + FAQPage JSON-LD, which would make the site visible to both Google's rich results and the AI assistants that are rapidly becoming the first stop for solar shoppers. Fixing the zero counters, the schema gap, and the review-surface problem in sequence could reasonably double organic lead flow within 60 days without a full redesign.
