A11Y-RISK

OVERALL GRADE

D+

AVG 3.9 / 10

A ten-dimension audit of your website's ability to win customers across **search, mobile, AI assistants, and local discovery**. Every finding below is observed directly from your live site — nothing estimated.

02 DIMENSIONAL SCORING

Design / UX		5/10	Mobile Experience		6/10
Technical SEO		4/10	Local SEO		4/10
Content / E-E-A-T		5/10	AEO · Answer Engine		2/10
GEO · Generative		3/10	Agentic Readiness		2/10
Accessibility		4/10	CRO		4/10

Bars: **green** = strong (7–10) · **amber** = needs work (4–6) · **red** = critical (1–3). The three lowest dimensions are where you're losing the most customers right now — detailed on the following pages.

VERIFIED DIMENSIONS

The four dimensions measured directly from your live site.

SCORE DISTRIBUTION

How all ten dimensions fall across the risk bands.

03 FORGE REPORT

▲ WHAT'S WORKING

- **Tap-to-call phone in the footer.** The footer renders 205-679-8666 as a live tel: link — mobile visitors can dial with one tap. That's the single most critical CRO element and it's in place.
- **Business email visible and linked.** info@vulcansolarpower.com appears as a mailto: link in the footer, giving searchers and AI crawlers a direct contact method without hunting for a form.
- **Clear service scope on the homepage.** The hero copy explicitly covers residential, commercial, and non-profit turnkey installs including design, permitting, and interconnection — a useful signal for both visitors and search engines.

▲ WHAT'S COSTING YOU LEADS NOW

- **Zero reviews displayed on the site.** Vulcan holds a 5.0 Google rating but surfaces no testimonials, star widgets, or review excerpts anywhere on the homepage. A competitor with half the rating but a review widget on their homepage will win the trust comparison every time.
- **No visible NABCEP certification or trust badges.** The homepage copy mentions 'certified professionals' without naming the certification. Competitors like Eagle Solar & Light lead with NABCEP credentials; this site hides its qualifications in paragraph text, costing conversions from buyers doing due diligence.
- **Generic dated template with limited trust signals.** The header logo path (/images/VSP-Header-Logo.png), a back-to-top button image, and a flat hero slideshow all signal a mid-2010s template. EcoWatch explicitly flagged 'limited information available on website' as a con — buyers who do their research notice.
- **No FAQ, schema markup, or service-area pages.** The site has no structured data, no FAQ section, and no city-level landing pages. Jefferson County is the only service area listed anywhere online, leaving surrounding markets in Shelby, St. Clair, and Blount counties invisible to Google and AI assistants.

04 YOUR AI SEARCH BLIND SPOT

AEO + GEO · HOW MACHINES READ YOUR SITE

When a Birmingham homeowner asks ChatGPT or Google's AI overview **"who installs residential solar panels near Birmingham, AL?"**, your site gives the model almost nothing it can extract and quote back. There is no FAQ schema, no answer-shaped paragraph explaining what your installation process covers, and no Organization JSON-LD telling AI systems who you are.

The content reads as marketing slideshow text, not structured answers a language model can cite. As more solar searches start inside an AI assistant rather than a classic results page, **the companies with zero structured data are systematically filtered out of the answer** — before a prospect ever sees a link.

COMBINED AI VISIBILITY

A blended index of how discoverable you are to answer engines, generative search, and autonomous agents — the AI layer that increasingly sits between customers and local businesses.

05 AGENTIC & FUTURE READINESS

CAN AN AUTONOMOUS AI AGENT ACTUALLY USE YOUR SITE?

A growing slice of solar quote requests will soon be initiated by AI agents acting on a homeowner's behalf — pulling your service area, license credentials, and contact details automatically. We probed whether vulcansolarpower.com exposes that information in machine-readable form.

As built, an AI booking agent would **fail to confirm your service counties, find your NABCEP license number, or extract structured hours** from this site — and would move to a competitor whose site it can read. There is no llms.txt, no schema NAP block, and no robots.txt guidance for AI crawlers.

```
// agent-access probe
Semantic HTML5 landmarks ..... PARTIAL   Basic divs; no explicit section/nav ARIA
roles observed
robots.txt bot permissions .... UNVERIFIED
llms.txt ..... ABSENT
Machine-readable NAP ..... ABSENT   Address/phone not in JSON-LD or schema.org
markup
Tap-to-call & mailto hooks .... PARTIAL   tel: and mailto: present in footer only,
not in hero/CTA area
```

06 LOCAL COMPETITIVE POSITION

BUSINESS	GOOGLE	MOBILE CALL	SCHEMA / AI-READY	NAME / DOMAIN	OVERALL
Vulcan Solar Power, LLC (you)	5.0★ · 7	~	×	✓	D+
Eagle Solar & Light	5.0★ · 4	✓	~	✓	B-
Solar Technology Alabama	?★ · 0	~	×	✓	C

06 LOCAL POSITION & REPUTATION

REPUTATION VS. SEARCH VISIBILITY

Reputation strength

5.0 of 5 - 7 rev

Search visibility

buried

THE DISCONNECT BETWEEN REPUTATION AND VISIBILITY

Vulcan holds a **perfect 5.0 rating on Google** — but with only 7 reviews, that score is statistically thin and nearly invisible in local map-pack rankings where review volume drives placement. Eagle Solar & Light, the most prominent local competitor, has NABCEP credentials prominently displayed and actively growing review counts. EcoWatch lists Vulcan alongside three other local installers, all rated identically at 3.0/5 by the aggregator, with 'limited information available on website' listed as a shared weakness.

The good news: existing customer language is genuinely strong — one reviewer called the team **'smart, trustworthy, and the highest level of quality in the Southeast.'** That language should be front and center on the homepage, not buried in a Google listing most visitors never find.

07 ACCESSIBILITY & COMPLIANCE

SCORE 4 / 10 · INCLUDED BECAUSE IT'S BELOW THRESHOLD

A portion of your potential customers — and Google's own ranking systems — depend on an accessible site. We found gaps that are both a legal-exposure risk and a quiet ranking drag:

```
// accessibility & compliance probe
```

```
Image alt text ..... SPARSE    Logo and back-to-top button images carry  
no meaningful alt text
```

```
ARIA landmark roles ..... MINIMAL
```

```
Colour-contrast (text vs bg) .... ADEQUATE
```

```
Cookie consent notice ..... ABSENT
```

The missing cookie consent notice is the priority fix — a one-line addition that removes a compliance flag and signals active site maintenance to visitors.

08 THE 30-DAY PLAN

WEEK 1

Stop the bleeding

Embed 3-5 Google review excerpts on the homepage and add NABCEP/certification badges above the fold — zero-code changes that immediately improve trust for every visitor.

WEEK 2

Fix the foundation

Add Organization JSON-LD with NAP, move the tap-to-call number into the hero section, and complete the Google Business Profile with service-area counties and project photo uploads.

WEEK 3

Open the AI door

Create a FAQ page with QAPage schema covering common solar questions for Birmingham — Alabama Power rates, federal tax credit, payback periods — so AI assistants can cite you as the local authority.

WEEK 4

Convert the win

Build a modern, mobile-first landing page for residential solar in Birmingham that surfaces reviews, NABCEP credentials, and a single prominent CTA, replacing the current generic slider template.

09 BOTTOM LINE

THE ONE THING THAT MATTERS MOST

Vulcan Solar Power has a genuine 5-star reputation and NABCEP-certified professionals, but its website is a dated mid-2010s template that hides every trust signal — no reviews on-page, no visible certifications, no structured data — leaving a perfect rating functionally invisible to both Google and AI assistants. The highest-leverage move is surfacing existing social proof (reviews, NABCEP credentials, project photos) directly on the homepage while adding machine-readable NAP and Organization schema, turning a strong offline reputation into trackable inbound leads. For a local solar installer competing in a market where buyers do extensive online research before contacting anyone, closing this credibility gap is worth multiple qualified leads per month.
